Hartnow Technologies: Marketing Simulation

POPCORN TROLLS

OUR RESULTS

10 period timeline

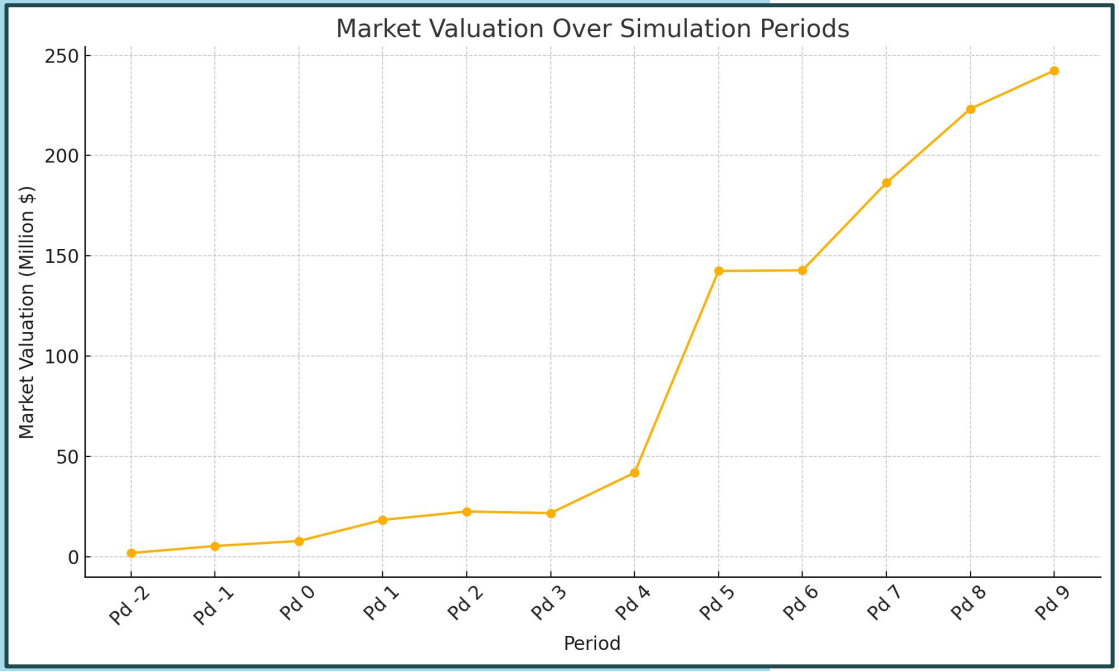
Team Member 1 : 242.8 million

Team Member 2: 228.1 million

Team Member 3: 190.3 million

Team Member 4: 128.1 million

Team Member 5: 89.2 million

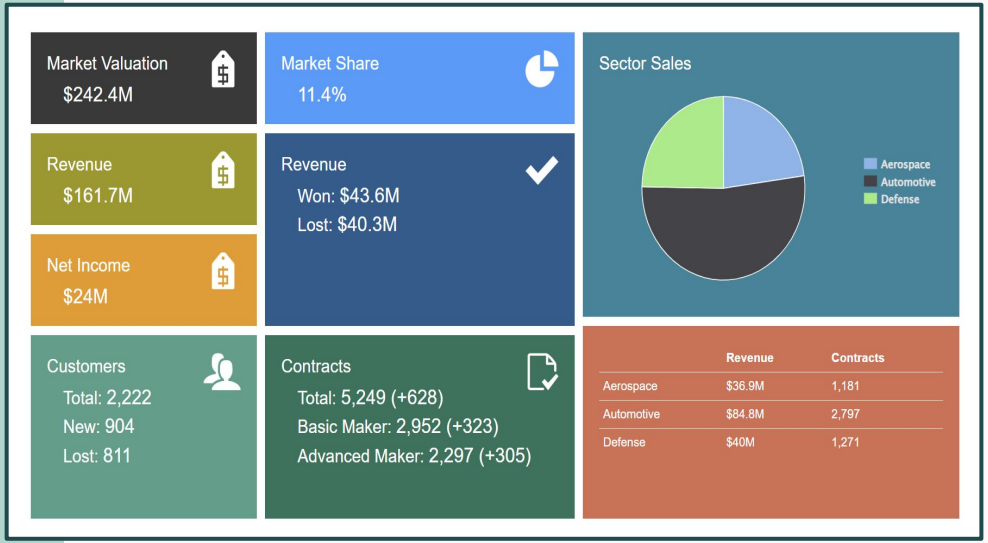


OUR FOCUS

We used five different attempts to try different strategies :

- Purchasing CRM reports at different times
- Buying vs Not Buying Sector Specific Purchasing
- Investing in Loyalty or Referral Programs
- Keeping a steady budget or drastically changing the numbers
- Using all of our Budget each period or keeping a cushion

BUT, this one worked best :



WHAT WORKED WELL

Invest Early in CRM packages and reports

CRM package, NPS reports, and DC reporting all in period 1-3

- Customer satisfaction
- Improved retention
- Boosted CLV

Built Relationship Infrastructure

SAM : period 2
Loyalty: period 4
Referral: period 6

- Increase purchase frequency
- Extend customer lifespan
- Lowered churn

Heavy Investment in Customer Service

Heavy Increase throughout especially in period 6

- Focusing on the customers we had
- Enhanced CLV and retention

Premium Services: Shift to High- Value Customers

Purchased Premium offering in period 5 and expanded with reports

- Gain of more stable contracts
- Higher CCAV and CLV

Heavy Branding Investment

Steady investment and heaviest from later periods on

- Strengthened positioning in automotive and defense
- Creates retention and CLV
- Lower acquisition costs and increased pricing

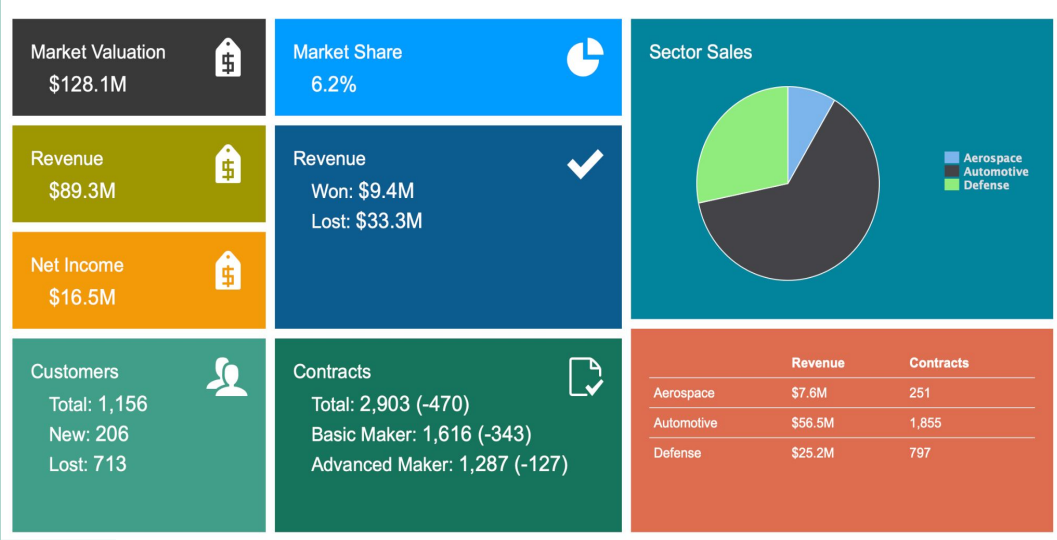
Segment	What They Value Most	How They Responded to My Strategy	Strategic Benefit	Overall Impact
Automotive	Sales support, fast service, loyalty perks, premium upgrades	Showed the strongest growth in contracts, revenue, and retention	Scalable, high-CLV segment that justified larger budget allocation	Became the main driver of revenue and CCAV growth
Defense	Reliability, long-term relationships, high-touch service	Benefited greatly from SAM roles, loyalty programs, and premium service	Strong retention and long customer lifespan	Increased stability and boosted lifetime value per customer
Aerospace	Specialized service, consistent support, premium-quality features	Grew slower but contributed steady contracts and premium demand	Diversified revenue and reduced segment risk	Added stability to CLV and supported premium adoption

OUR PROCESS

In trying three different main strategies we were able to

- Gain CRM reports
- Test which programs worked best and when
- Test the ratios of segmentation of budgeting out each sector

BUT, with a much lower market valuation ..



What did not work as well

Purchasing each Package right when they are available

Referral investments converted slower, realized short term gain was minimal

Investing in Customer Service and branding heavily before NPS and churn were stable

Spending as a whole was over distributed, reducing the impact of each sector

Overspending on sectors with poor ROI

Should have been focuses on high revenue driving sectors

Pushing off Sector Specific Spending

Allows Market valuation to grow steadily to period 8, but plateaus after because it needs targeted customers

Leaving a Budget Cushion

While leaving a cushion of budget from period to period allows you to still grow your MV, we found that it caused a slower rate of growth

- Decreases maximum possibility of factors like retention, CAC efficiency, and overall CLV when in a concentrated time period

How could we improve ?

CONTROL LOST REVENUE

Maintain track of lost customers through tracking churn reports

01

AVOID OVERSPENDING

Some sectors didn't justify the heavy budgets we gave them → try maintaining a delicate balance between internal and external sales.

02

LAUNCH PREMIUM SLIGHTLY EARLIER

If we had launched it earlier, we would have captured high-value customers sooner, created more stable contracts, and lifted market valuation earlier.

03

BUY CLV/CCAV EARLIER

Identify high value customers sooner and then organized spending around loyalty, referral, and branding programs earlier

04

Thank you!
